Types of tile flooring

Porcelain tile is constructed quite similar to ceramic as manufacturers use clay and other natural materials and then fire the materials in a kiln in order to create specific shaped stones. This particular type of flooring provides attributes of water resistant, durable, and reliable floor implemented into their home or business space. There are two types of finishing; matte or glossy and exudes an earthy tone surface such as granite or limestone appearance.

Ceramic tile It is made up of sand, natural products, and clays and once it has been molded into shape they are then fired in a kiln. When making ceramic tiles they can either be glazed or unglazed. With increasing popularity, there are many designs of ceramic tiles.
